Authorization for this examiner's amendment was given in a telephone interview with John Hornickel on March 10, 2009.

The application has been amended as follows:

Claim 1:

An apparatus comprising:

an elongated regular octagonal first tubular form element, wherein the tubular form element includes a tubular boundary of seven adjacent wall faces and one open face, wherein the tubular boundary bounds a longitudinal interior chamber, wherein the tubular form element includes six female engagement portions each ~~adapted~~ configured as a T-shaped slot having a locus of connection to engagingly receive a male engagement portion ~~adapted~~ configured as a T-shaped fin also having a locus of connection,

wherein each female engagement portion extends into the longitudinal interior chamber from a vertex of adjacent wall faces, wherein each female engagement portion includes an opening at the tubular boundary as the T-shaped slot, wherein, the tubular form element includes two male engagement portions extending outwardly of the tubular boundary,

Art Unit: 3633

wherein the two male engagement portions at the open face of ~~one~~ the first form element ~~can~~ and, are adapted to engage with two female engagement portions of a elongated regular octagonal second tubular form element on any one of five adjacent wall faces having two female engagement portions at two vertices of the wall face,

wherein, ~~engagement of~~ when engaged, the male engagement portions of ~~one~~ the first tubular form element and the female engagement portions of the second tubular form element identify a relationship of common loci of each connection with placement of each locus at the vertices of the rectangular octagons of the ~~one~~ first tubular form element and the second tubular form element,

wherein, when engaged, the female engagement portions extending into the longitudinal interior chamber to permit the internalization of the connection off the male engagement portion of ~~one~~ the first tubular form element adapted configured as the T-shaped fin and a the female engagement portion of the second tubular form element adapted configured as the T-shaped slot to allow external side surfaces of adjacent tubular form elements as wall faces to lie within a plane for creation of a flat surface arrangement, and

wherein the flat surface arrangement ~~can~~ is adapted to be created by female engagement portions of adjacent form elements engaging an insert panel at two male engagement portions, also adapted configured as T-shaped fins

Art Unit: 3633

identical to the male engagement portions on the ~~one~~ first tubular form element, to form a substantially flat wall surface.

Claim 2:

The apparatus of Claim 1, further comprising ~~at least a~~ an elongated regular octagonal second tubular form element engaged with the ~~one~~ first tubular form element and the insert panel engaged with both the ~~one~~ first tubular form element and the second tubular form element to close a triangular area resulting from the two octagonal form elements being engaged, wherein the substantially flat wall surface is formed by a wall face of the ~~one~~ first tubular form element, the insert panel, and a wall face of the second tubular form element

Claim 13:

The apparatus of Claim 2, wherein the tubular form elements ~~has~~ have apertures in at least one face of ~~the~~ each form element.

2. Claims 1, 2, 5, 8, 9,10,16,17, and 18 are allowed.
3. The following is an examiner's statement of reasons for allowance: Claims 1, 2, 5, 8, 9,10,16,17, and 18 are allowed because the prior art of record fails to teach or adequately suggest an elongated octagonal tubular form element with six female engagement portions as recited in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
